DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 05-19-2006, the information disclosure statement has been considered by the examiner.

Allowable Subject Matter

2. Claims 1-5 are allowed.

Reasons for allowance

3. The following is an examiner's statement of reasons for allowance:

Regarding independent claims 1 and 5, the reference of Natarajan (U.S. Patent No. 5,790,070) teaches a Satellite 20 contains digital controller 42 having a first input and a first output coupled bidirectionally to transceiver 44. Controller 42 is desirably configured as one or more conventional microprocessor circuits with elated peripherals, memory and input/output devices. Accordingly, controller 42 operates in accordance with one or more computer programs defined by computer software. Transceiver 44 has a second input and a second output bidirectionally coupled to antenna system 46. In the preferred embodiment of this invention, antenna system 46 contains antenna beam former networks with electronically steerable phased-array antennas 26 configured in a manner well known to those skilled in the art. Desirably, antennas 26 are high-gain antennas capable of generating and independently steering relatively narrow pencil beams 28. Control station 22 desirably communicates with satellite 20 through dedicated uplinks and downlinks. Bidirectional radio signals are exchanged between satellite 20 and control station 22 through antenna 48 and dedicated beam 29. Antenna 48 is bidirectionally

coupled to a first input and a first output of transceiver 50. A second input and a second output of transceiver 50 are coupled to a first input and a first output of controller 52. Controller 52 is desirably configured as one or more conventional microprocessor circuits with related peripherals, memory, and input/output devices (see fig. 2, col. 3, lines 30-55). However, Natarajan alone or in combination with other prior art of record, fail to disclose, An apparatus for controlling a switch of a satellite transponder for multibeam communication, which will be referred to as a *switch controlling apparatus* herein, comprising: an earth control station interfacing means for receiving and processing commands from an earth control station, *collecting operation states of the switch controlling apparatus and reporting the operation states to the earth control station*; a reference frequency generating means for generating a reference clock needed to operate the switch controlling apparatus and generating a reference frequency needed for the operation of the switch controlling apparatus based on the reference clock; and a *switch controlling means for reading contents of a memory that stores a switching sequence periodically, detecting and correcting an error of the contents to generate a switch control signal, and transmitting the switch control signal to a radio frequency (RF) switch*, as specified in independent claims 1 and 5.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
